

Charcoal Class

With half term in February there was a natural change of topics in our subject lessons. In Discovery, prior to the First World War, we learnt about volcanoes and earthquakes: we made our own volcanoes with vinegar and baking soda - our results varied from being an eruption to a lava flow; but we had fun creating them. When studying earthquakes, we made a variety of structures and then tested them on sand to see how sturdy they were. Food tech continues to produce some yummy results with pancakes at the end of the month. We are improving our musicality with Rock Steady on Friday afternoons and will continue to do so into March. Some members of Charcoal Class were superb ambassadors for Hollywater School at the opening of Bird World's new flamingo enclosure - they learnt some amazing facts for example flamingos are pink due to their diet.
